### 3.5.1 Warm Up - Using Bivariate Data in Context
Card Sort
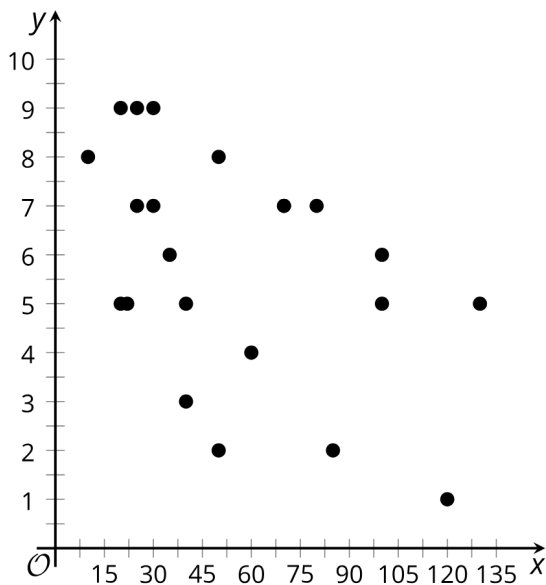

Cut the following cards apart. Then, match the variables to the scatter plot you think they best fit. Be prepared to explain your reasoning.

$x - variable$:
Daily low temperature in Celsius
for Denver, CO

$y - variable$:
Boxes of cereal in stock at a grocery
in Miami, FL

$x - variable$:
Average number of free throws
shot in a season

$y - variable$:
Basketball team score per game

$x - variable$:
Measured student height in feet

$y - variable$:
Measured student height in inches

$x - variable$:
Average number of minutes spent in a waiting room

$y - variable$:
Hospital satisfaction rating
